A National Pricing System

One Possible Solution

Presented To
Mileage Based User Fee Symposium

April 14, 2009
Austin, Texas
The Gas Tax: A System at Risk

• Without major changes, the motor fuel tax will not be able generate the revenue needed to maintain and expand our nation’s transportation infrastructure in the future

• An ominous trend
  • Political reluctance to raise tax rates
  • Increasing fuel efficiency
  • Search for alternative fuels

• Major inconsistency in national policy
  • The backbone of all transportation finance is dependent on the taxation of a commodity we seek to discourage the use of !!

• Federal policy to increase fleet fuel efficiency to 35 MPG by 2020

• We’re about to get very serious about Climate Change in the US
Increasingly Clear National Policy Direction

- National Policy Commission suggests gas will only be sufficient until 2025
  - Suggested strong consideration of VMT fees
  - Calls for major planning effort in next reauthorization
- National Transportation Infrastructure Finance Commission recommends moving off gas tax by 2020
  - Most detailed and specific recommendation yet
  - Stresses urgent need to move to direct road user charging to provide
    - Sustainable revenue source
    - Mechanism to manage demand
- It is increasingly clear: **US will likely transition off the gas tax between 2015 and 2025**
The problem with the gas tax is not that it is inefficient
  - It is efficient

The problem with the gas tax is that it is not sustainable
--- in the face of:
  - Need to reduce congestion
  - High gas prices
  - Increasing fuel efficiency
  - New alternative fuels
  - Global warming
  - Need for energy independence
  - Political realities
A Vision for the Future: A National Transportation Pricing System

• Every vehicle in America equipped

• Fully automated electronic fee collection
  ▪ VMT fees to replace fuel tax
  ▪ Tolling and Pricing
  ▪ Transit fare Payment
  ▪ Parking charges

• Potential for integration with ITS services
Multiple Uses of Pricing System

• Replace fuel tax with VMT tax system
• Tolling and other direct pricing applications
• VII and other ITS applications
Many Challenges

- Perceived overwhelming technical complexity
- Privacy issues
- Enforcement and security
- Perceived high cost of deployment and operations
  - As compared with gas tax
- Payment and collection issues
- Revenue distribution issues
- Equity issues
A Key Part of the Solution: National Travel Card

Travelers Choice

- National Travel Card
  - Maximize convenience where privacy not a concern
  - Linked to credit card or bank account
  - Requires no action by user once opened

- Individual Smart Card

- National Travel Account

- Private Stored Balance
  - Fully anonymous
  - No travel data stored; not linked to person or vehicle
  - Network of stored balance replenishment options
  - No credit card or bank account needed
VMT Fee Functions
(Replacing the gas tax)

Automated Cellular Connection

OBU

GSM

GPS

Ignition Interlock

Card Reader

In-Vehicle Display

<tr>
<td>Congestion Fee</td>
<td>0.500</td>
<td>0</td>
</tr>
<tr>
<td><strong>Total Per Mile Change/Mile</strong></td>
<td><strong>$0.030</strong></td>
<td><strong>$0.040</strong></td>
</tr>
</tbody>
</table>
Illustrative Revenue and Distribution

• Hypothetical 50-mile trip (all Illinois)
  - 20 miles outside Northeast Region
  - 30 miles inside Northeast Region
  - 16 miles inside Chicago
  - 5 miles inside Congestion Zone

• Charges and Distribution
  • Federal (50 @ $0.010) = $0.50
  • State (50 @ $0.020) = $1.00
  • Northeast Region (30 @ $0.010) = $0.75
  • Chicago (16 @ $0.005) = $0.08
  • Congestion Zone (5 @ $0.500) = $2.50
  • Total trip charge = $4.83
Other Direct Pricing Functions

- Toll Facilities
- HOT / Managed Lanes
- Cordon Pricing
- Parking Systems
- Transit Payments (Direct card)
- Taxis (Direct Card)
- Toll Operators and other 3rd party service providers simply “tap into” the national system
  - Greatly reduces the cost of collection
  - Greatly increases ease of pricing deployment
Adding a DSRC Link for Direct Data and Revenue Transfer
Roadside Infrastructure Provided by Toll Operations or Service Providers
In Vehicle ITS Services

- Vehicle-Infrastructure Interface (VII)
- Dynamic Route Guidance
- Access and Security Control
- Provided by 3rd parties
  - Charges for services collected through system
Potential VII and Other ITS Services

OBU

- GSM
- DSRC
- GPS

Conduit for VII / ITS Services
National Network Concept

- State Networks
- Toll Operators
- Congestion Management Zones
- Parking Operators
- Transit Systems
- Taxis
- ITS Services

Revenue Claims:

- Stored Balance Network
- National Clearinghouse
- Federal Agencies
- State Networks
- DMV’s
- Regional Service Centers

Federal Agencies

DMV’s

Regional Service Centers

DMV’s

Regional Service Centers

DMV’s

Regional Service Centers

DMV’s

Regional Service Centers
Revenue Transfer to Federal, States and Service Providers

Payments to:
- State Networks
- Toll Operators
- Congestion Management Zones
- Parking Operators
- Transit Systems
- Taxis
- ITS Services

National Clearinghouse
- Stored Balance Network

State Networks
- Federal Agencies
- DMV’s
- Regional Service Centers
National Travel Account Management

- National Clearinghouse
- Account Data Base
- Credit Card
- EFT
- Direct Billing (Commercial Accounts)
Stored Balance Replenishment Options

- Bank ATM’s
- DMV’s
- Regional Service Centers
- Retail Partners
- Major Employers
- Parking Facilities
- Retail Centers
- Transit Centers
- Kiosks

ACCEPT
- Cash
- Credit Card
- Debit
Rough (very rough) Costs??

- **Probably $150 - $250 per vehicle**
  - About 1% of vehicle cost
  - About 2% of revenue collected over life of device

- **Initial Cost to equip national fleet**
  - About $50-$70 billion
  - Initial cost is only 20-25% of the $300 billion needed annually for transportation
  - System could replace virtually every form of transportation revenue now collected

- **Only OBU’s and Clearinghouse Structure Financed through National System**
  - All roadside and other local system equipment cost paid by 3rd party users “tapping into” the national system

- **Future net annual costs about $15-$25 billion per year**
  - About 5-10% of annual revenue collected
  - Major part of operating cost offset by third party service providers “tapping into” system
In Summary...

• A national pricing system is needed to provide a sustainable foundation for transportation finance in the future
  
  ▪ A system based on user fees and charges *per mile* instead of *per gallon*
  
  ▪ A system designed to provide a single device means of electronically paying all forms of transportation fees and charges
  
  ▪ A system which will *link road use with payment* to enable better management of demand through variable pricing
  
  ▪ A system that will be seamlessly *intermodal*
  
  ▪ A system which will preserve privacy and allow for anonymous operations for those whose choose it
In Summary...

• A pricing system framework designed to provide DSRC access to 3rd party service providers and facility operators
  ▪ Toll and parking operators simply “tap into” the system
  ▪ VII and other ITS services provided “on demand” – paid thru system

• A pricing system for which a large part of the operating cost can be paid by fees from 3rd party users who will find it very cost effective to tap into the system
  ▪ Toll facilities
  ▪ Parking facilities
  ▪ Transit systems
  ▪ ITS providers
  ▪ Access control systems
In Summary...

- It will be a big investment
  ...and certainly more complex and costly than the gas tax

- But it will provide a sustainable future for transportation finance

- Technology is essentially here today

- All it will take is the political vision (and courage) to decide to do it
  ...to start the long process of planning, design, consensus building, education and deployment

- The time to start is NOW!
